This article contains information about *BBC Digital's Strata AP Connect 2020*, which integrates with *DocMax*.

BBC Digital's Invoice Processing Automation solution cuts down the time accounts payable staff spend on manual data entry and manual handling of invoices in the office.

All emailed PDF invoices and credit notes can be automatically converted into data with the associated invoice document and dropped into the relevant *DocMax Work Queue* with little or no human intervention. The reducing balance of paper invoices can be scanned locally and processed in the same way. Accounts payable professionals can now evolve from spending up to 70% of their time dealing with bits of paper to undertaking other activities that add more value to the business. This is key for businesses that are looking to maximise the productivity of their staff in undertaking valuable and productive work.

Please see this [Strata AP Connect Brochure.pdf](#) for more information.
