

Process Bank Statements

Last Modified on 10/07/2024 3:24 pm AEST

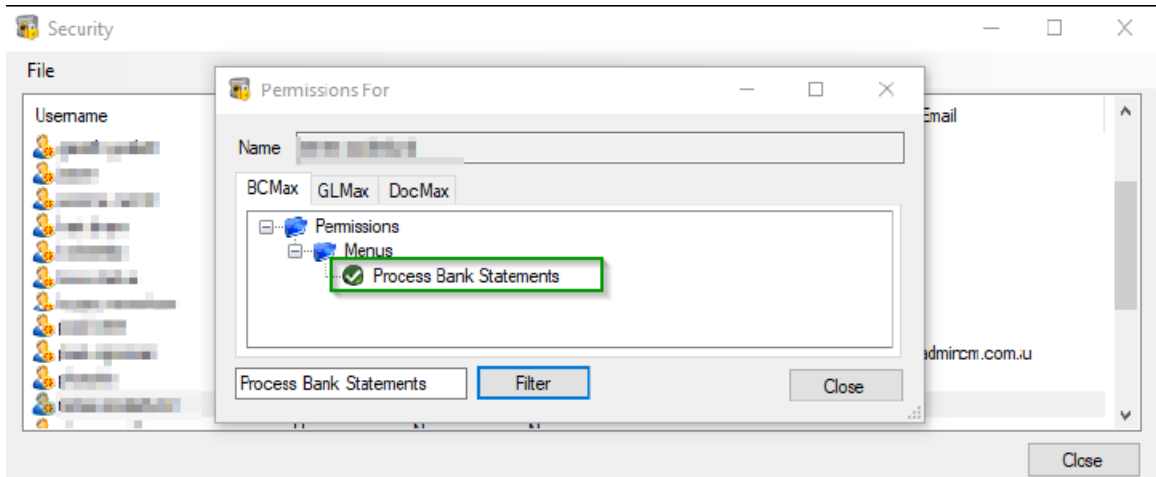

The instructions in this article relate to **Process Bank Statements**. The icon may be located on your [StrataMax Desktop](#) or found using the [StrataMax Search](#).

The **Process Bank Statements** screen is designed to give users a central point to view and action daily banking for all accounts across buildings in StrataMax and companies in GLMax, including both operating and investment accounts. StrataCash Management banking will automatically be downloaded and imported every morning; all other banks for example MBL, will still need to be downloaded daily and imported.

Answers to some frequently asked questions are also available [here](#). Review our list of Supported Banks and their file types later in this article.

Process Bank Statements | Security

In order to access and use the Process Bank Statements screen, you will to provide permission in **Security Setup**:

Process Bank Statements | Configuration

Open the *Configuration* screen by clicking the 'Configuration' button in the top right of the **Process Bank Statements** screen. There are three tick boxes in the *Configuration* screen:

1. *Auto-process creditor debits - exact amount owing*: This setting is observed in a scenario when an invoice has been entered, but the payment has been made via Direct Debit (Origin Energy, Telstra, etc.) A [Global or](#)

Local Legend must be set up in the **Bank Reconciliation** screen, with the correct details for the description, and the 'post to' account set to the creditor account. This setting will ensure the payment is processed automatically when the payment amount is the same as the creditor's balance.

2. *Auto-process creditor debits - less than amount owing*: This setting is observed in a scenario when an invoice has been entered, but the payment has been made via Direct Debit (Origin Energy, Telstra, etc.) A *Global or Local Legend* must be set up in the **Bank Reconciliation** screen, with the correct details for the description, and the 'post to' account set to the creditor account. This setting will ensure the payment is processed automatically when the payment amount is less than the creditor's balance.
3. *Default filter Account Manager to current user*: If a user is set up as an **Account Manager**, the building list will only display their managed buildings when they open **Process Bank Statements** (the account manager is configured in **Building Information**).
4. *Auto-process receipts to lots in legal action*: For any lots that are set in **Legal Action** using a solicitor agent, these can be set to auto-process in line with all other lots. If preferred to manually receipt these types of lots, do not include this global setting.
5. *Auto-process receipts to lots that have a payment plan*. For any lots that are set in **Legal Action**, using the internal payment plan agent, these can be set to auto-process in line with all other lots. If preferred to manually receipt these types of lots, do not include this global setting.
6. *Default Account Type Filter*: Setting this area will allow the default for either *All Account Types*, *Operating Only* or *Investment only* accounts to display when opening the **Process Bank Statement** window.

Process Bank Statements | Quick Reference Guide

Any bank accounts set to manual entry in **Bank Account Setup** will be flagged with 'Manual' in the 'Generated' date column and will stop any available statement data from downloading and processing.

This section provides quick steps on processing the unreconciled bank statements both for buildings in BCMAX and your company in GLMAX. If you are unfamiliar with the **Process Bank Statements** screen, we recommend reviewing the rest of this article, and the **Banking Process** article.

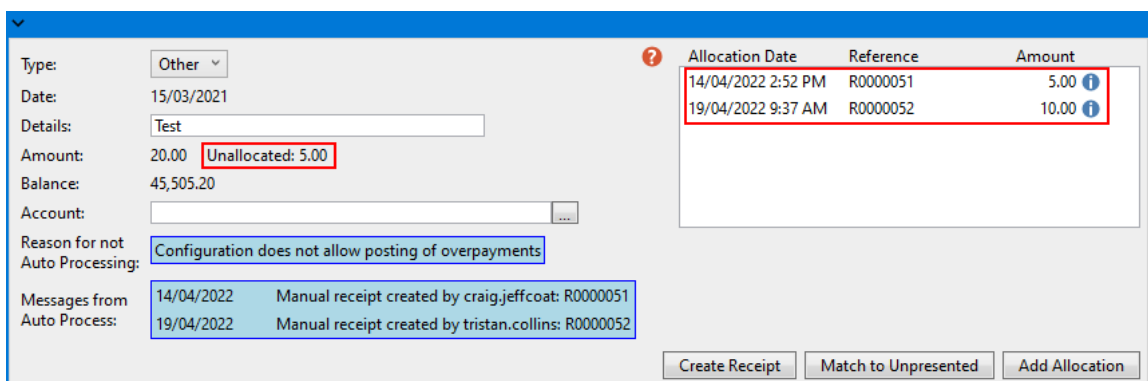

1. Search or select **Process Bank Statements**.
2. Check the 'Last Imported' date in the top to ensure it is current.
 - If you have BCMAX buildings or GLMAX companies that do not have an SCM bank account, then you will first need to download the banking file for their bank's website and either drag and drop the file into Process Bank Statements to be imported or save it to the configured directory, which is displayed on screen, then click the blue 'Import' button. For example, *StrataMax\BCM\Bank name* or *StrataMax\GLMAX\Bank name*

3. Tick the *Show only Unreconciled, with a Variance...* box in order to display only buildings or GLMax companies that need to be manually actioned.
4. Click the blue *Process Bank Reconciliation* icon, under the 'Actions' column to open the **Bank Reconciliation** screen for that building or company.

5. In the **Bank Reconciliation** screen, transactions that require manual action are identified with a red question mark icon. Simply click anywhere on that line to expand the details.
6. Check the 'Reason for not Auto Processing' field, which describes why the transaction hasn't auto processed and will determine what action is needed.
7. Depending on the reason mentioned above and the nature of the transaction, you will need to use one of the buttons at the bottom of the window:
 - o *Create Receipt* opens the **Receipt Entry** screen to enter and save a receipt for a deposit (for an unallocated levy payment for example). If the transaction is receipted across multiple lots, then they will be listed on the right side, and the line item will not reconcile until the total of the receipts equates to the total amount for the transaction with nothing unallocated.

- *Create Receipt (Sub-Group)* is only available for buildings with Sub-Groups and also opens the **Receipt Entry** screen, but allows the selection of debtors in the building's sub-group (utilities for example).

Type: Deposit

Date: 31/01/2022

Details: Electricity payment

Amount: 200.00

Balance: 12,909.76

Account: 105 ELECTRICITY INCOME

Buttons: Create Receipt, **Create Receipt (Electricity)**, Reverse Payment, Match to Unpresented

- *Allocate Creditor* is used for any credit notes that are received for a creditor account so that the refund can be correctly matched to the creditor transactions rather than simply being allocated to the creditor without any transactions. Example: ATO refund.

Type: Deposit

Date: 18/04/2022

Details: ATO466187596332200ATO

Reference:

Amount: 1,575.72

Balance: 40,004.89

Account: 08200003 AUSTRALIAN TAXATION OFFICE

Buttons: **Allocate Creditor**, Reverse Payment, Match to Unpresented

BUILDING 1 101010 - Allocate Creditor

Account: 08200003 AUSTRALIAN TAXATION OFFICE Date: 19/04/2022 Amount: -1,575.72

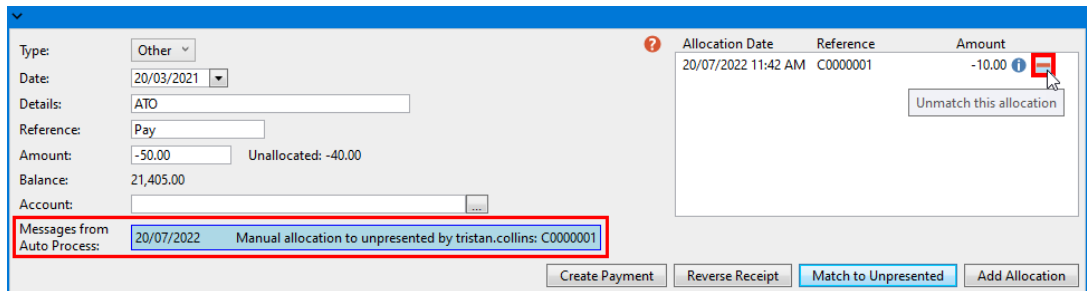

Reference	Date	Description	Invoice No.	On Hold	Invoice Amount	Unpaid Amount	Amount to Allocate
D0000002	31/03/2022	PAYG March 2022			150.00	150.00	150.00
D0000001	19/04/2022	GST for 31/03/22			-1,720.00	-1,720.00	-1,720.00
D0000003	19/04/2022	Interest			-5.72	-5.72	-5.72

Buttons: Include None, Include All, **Save**, Close

- *Reverse Payment* opens the **Payments Management** screen to *reverse the payment*.
- *Match to Unpresented* is used to present a previously entered transaction. For example if a cheque has been already received before the funds have cleared.
- *Unmatch this allocation* should be used to unmatch EFTs, cheques, and receipts that were manually matched. The user can then use the standard buttons/functions to correctly allocate the transaction.

Messages from Auto Process will report on the screen for the user.

- *Unmatch this allocation* option will not be available if the **Bank Reconciliation** has been finalised.

- *Add Allocation* This option can be used to process a transaction to an account code with the other side automatically entered to the Cash at Bank (similar to **Journal Preparation** without the need for the balancing side as this will always be Cash at Bank 012). For example, if an Opening Balance transaction downloads and there was a bank fee taken out prior, click *Add Allocation* to enter a transaction to a specific account code for the difference.

8. Once the transactions balances to the bank transaction amount, the line item will be reconciled (a green tick will display) and the **Bank Reconciliation** screen can be closed.

Process Bank Statements | Overview

This section provides brief explanations for each element of the **Process Bank Statements** screen. It is not intended to be a guide on processing or actioning the daily banking. See the [Banking Process article](#) for guidance on that, or the QRG above.

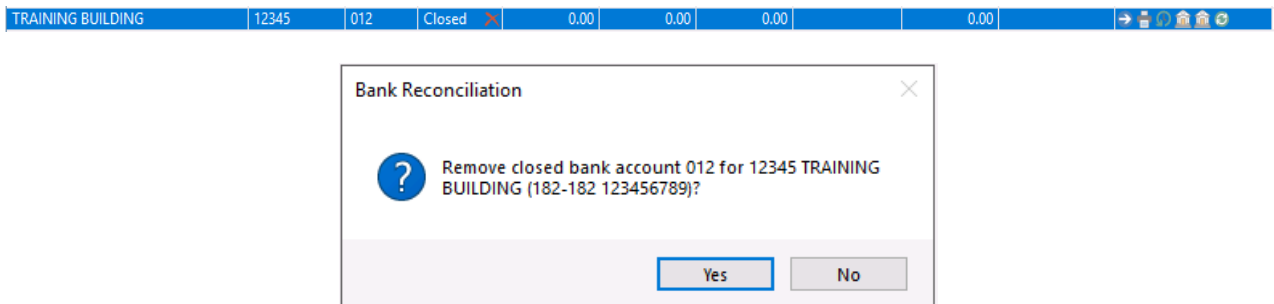

1. Open the *Configuration* screen.
2. These are the banks that have been registered and set up in StrataMax across your portfolio.
3. Any additional SCM bank accounts that haven't been set up in StrataMax yet will be listed here. You can click the blue 'Set up' icon to set up a new bank account for that building. If a closed bank account is listed in this section, it is recommended you contact SCM and arrange for the bank account to be closed. When the balance is 0.00 click the red cross to remove closed bank account from the Process Bank Statement screen.
4. Use the *Filter to Account Manager* drop-down to display only buildings that belong to that account manager.
5. The *All Account Types* drop-down can be used to filter between 'Operating Accounts' and 'Investment Accounts'.
6. Tick *Show only Unreconciled with a Variance...* to remove any buildings that don't require any manual action (recommended when working through the daily banking of unreconciled transactions).
7. The *All Banks* filter can be used to filter the results list to a specific bank. It will only display banks that have been registered and set up in StrataMax. This filter is only available if the 'All Account Types' is selected.
8. The table of buildings has a number of columns with information.
 - *Building* and *Building No.*
 - *Account* represents the general ledger account code that the bank reconciles with in StrataMax. Account '012' is for operating accounts, and '01301', '01302', '01401', '01402' for the investment account in ***Bank Account Setup***.
 - *Generated* displays the date of the bank statement and its transactions. If this notes 'Closed', when the balance is back to 0.00 click on the red cross to remove the closed bank account.
 - *Bank Statement* is the amount that in the bank account as of the 'Generated' date.
 - *Unpresented Payments* shows the total amount for payments that have been processed through EFT Manager, but have not yet cleared from the bank account.
 - *Unpresented Receipts* displays the total amount for receipts that have yet to be presented. This could stem from one or multiple receipts. Refer to ***Reconciling Unpresented Receipts*** for more info.
 - *Unreconciled Items* represents the total amount for bank statement items that have not been automatically allocated in the ***Bank Reconciliation***.
 - *General Ledger* is the amount for the '012 Cast At Bank' account in StrataMax and should match the *Bank Statement* figure.
 - *Variance* displays the difference between the figures in the *Bank Statement* and *General* columns, accompanied by a red 'Alert' button, which opens the ***Bank Reconciliation*** screen for that building.
 - *Actions* contains a variety of icons and buttons that will differ from building to building, on a daily basis. See the ***Process Bank Statement Actions*** section below for more details.
9. Filter bank accounts that are configured to reconcile automatically as well as those configured for manual entry, or filter between the two. The default for this filter can be set in the *Configuration screen*. This filter is only available if the 'All Account Types' is selected.

10. The *Other Investment Accounts* button can be used for manual entry of fees and interest for non-reconciled investment bank accounts with transactions for bank accounts not supported by StrataMax.
11. Clicking *Process* will reconcile transactions based on configuration include Receipt Entry Configuration and Process Bank Statement Configuration (this step is automated with StrataCash Management accounts)
12. *Messages from Process* opens the **Log Viewer** specifically for banking related items such as receipts created for lots in Legal Action, Opening Balance and last closing balance being different etc.
- 13.
14. *Close*.

Remove Closed Bank Account

If a closed bank account is listed in **Process Bank Statements**, when the balance in the Bank Reconciliation is 0.00 click the red cross and select 'Yes' to remove closed bank account from the **Process Bank Statement** screen.

Process Bank Statements | Actions & Alerts

This section briefly explains what each of the icons and buttons do under the *Actions* column in the **Process Bank Statements** screen.

	Balance Bank Reconciliation	Opens the Balance Bank Reconciliation screen which is only available if the Bank Reconciliation does not balance. This tool allows various actions to be taken including marking statement items as matched, receipts & payments as presented and creating a journal allocation if required. Changes made will only be able to be saved if the Difference is \$0.
	Process Bank Reconciliation	Opens the Bank Reconciliation screen for that building.
	Print Bank Reconciliation Report	Opens the Bank Reconciliation Report screen for that building.

	Search Bank Statement History	Opens the Search Bank Statement History screen with the 'Date' and 'Account Code' fields. This is useful for searching historical transactions and allows for viewing the details of the allocation including receipt breakup, invoices for payments etc.
	Search Statement Info Header	Opens the Statement Info Header screen with the 'Balance Date' field. This is useful for confirming banking has processed and the closing and opening balances match.
	Search Statement Info Detail	Opens the Statement Info Detail screen with the 'Date' and 'Bank' fields. This is useful for searching historical bank transactions and displays the transaction details based on the bank data.
	Refresh	Clicked after processing the Bank Reconciliation screen for that building, so that the building disappears from the Process Bank Statements screen. I.e. it has been actioned.
	Alert Notification (hover mouse cursor over the icon to display the alert)	Invalid SCM BSB or Account Number.
	Alert Notification (hover mouse cursor over the icon to display the alert)	Bank account balance not reconciled with statement - view the Bank Reconciliation Report for details.
	Alert Notification (hover mouse cursor over the icon to display the alert)	Opening balance and last closing balance different. Opening Balance: <i>AMOUNT</i> Closing Balance: <i>AMOUNT</i> Generation Date: <i>DD/MM/YY</i>
	Alert Notification (hover mouse cursor over the icon to display the alert)	Not processed - building locked by <i>USER</i> .

Process Bank Statements | Other Investment Accounts

This function can be used to enter fees manually, and interest for non-reconciled investment bank accounts with transactions for bank accounts not supported by StrataMax.

The **Bank Account Setup** for the investment account must be entered first to access the below functions.

1. Search or select **Process Bank Statements**.
2. Click the *Other Investments* button to open the 'Other Investment Accounts' screen.

- By default, the table is sorted by the 'Building Name' column, but can be sorted by any of the other columns, simply by clicking on its header.
- Enter a *Posting Date*, which will default be the StrataMax *Working Date* (found at the top of the StrataMax desktop).
- Use the *Show Imported Before* drop-down calendar to filter accounts imported into StrataMax before the selected date.
- Use the *Show Building* filter to select a building from the drop-down. If not, then all available accounts will be displayed in the table. Click the red 'X' next to the drop-down to remove the filter.
- Use the *Show Bank* drop-down filter to narrow the list by the required bank. If not, all available banks will be displayed in the table. Click the red 'X' next to the drop-down to remove the filter.
- The *Show Account Number* can be used to narrow down the table to specific account numbers. Type the first few digits of the account number, and the table will automatically refresh as you type more characters.
- Clicking the *Global Legends* button opens the 'Global Investment Legends' screen. See the [Global Investment Legends](#) below.

- Select the required investment account in the table, which will expand the entry to reveal more fields with information. You can also switch between accounts using your keyboard's 'up' and 'down' arrow keys.
- Click the *Show Ledger Card* button next to the *General Ledger* field to open a table with the account's transaction details.
- Enter the *Interest Rate* (supports up to four decimal points).

13. Enter the account's maturity date using the Maturity Date drop-down calendar. This date will be reflected on relevant reports and used for the 'Maturing Investment Accounts' *Dashboard* item.
14. The '+ Interest' and '-Fees' fields are used to enter any interest and fees that have accumulated on this account. In order to use these fields, general ledger accounts for interest and fees must be set up for this bank account's specific general ledger code in Global Investment Legends.
 - Typing a number into this field without a legend will display a yellow warning in the bottom left.

No Interest Account Code set on Legend or Bank Account

15. If statement data exists for the account, a blue notification will appear, and the *Promote to use Bank Reconciliation* button can be clicked to automate reconciliation on this account. This will then be available in the main *Process Bank Statements* screen for reconciliation.

16. Click the *View Statement* button to display the 'Statement Info Details' screen, which shows transactions that are available for processing.

Global Investment Legends

If an investment account is with a bank that isn't supported by StrataMax, then it will need to be reconciled manually in the 'Other Investment Accounts' screen. In order to record interest and/or fees for these transactions to the general ledger, you will first need to configure StrataMax with general ledger account codes. Each general ledger account code (01301, 01302, 01401, etc.) that is linked to an investment bank account needs to be set up with an interest and fee account. All investment general ledger account codes can be set up with the same interest and fee accounts if needed.

If a specific building needs to post interest and/or fees to a different set general ledger account codes to what is set up in 'Global Investment Legends', then you will need to configure them separately in the *Bank Account Setup* screen for that building.

1. Search or select *Process Bank Statements*, then click the *Other Investments* button.

GLENWOOD ROAD	12044	012	0.00	0.00	0.00		48,930.10	-48,930.10

Supported Banks

StrataCash Management is the preferred banking option due to several integrated features with StrataMax. StrataCash Management offers automatic downloading of statement information into StrataMax daily providing added security being banking file free. There is also protection against overpayments / duplicate payments as well as Direct Debit integration for amounts due for Owners.

If you are considering opening a new account with an institution that you have not used with StrataMax before please contact our [StrataMax Support Team](#) to clarify if files can be utilised in StrataMax and the alternative will be to complete manual banking for non-supported accounts.

All banking that is downloaded must be in a specific format for StrataMax. Following is a list of the formats required:

Bank Name	File Format
ANZ	ddmmyyB.CSV and ddmmyyT.CSV
Commonwealth Bank	ddmmyy.CBA - this file type is no longer supported.
Bendigo Bank Limited	ddmmyy.BBL
Heritage Bank	ddmmyy.HBS
Macquarie Bank	ddmmyy.TXN
NAB	ddmmyy.AI / BAI
St George	ddmmyy.STG - file date is critical as the date is not contained in the file itself.

All banking files must include all bank account data for all accounts in the portfolio, including Investment Accounts if applicable and is subject to one file per day, with Macquarie Bank being an exception.

Macquarie Bank: Two bank files for the same date can import with one being for the opening accounts and the other for the investment accounts. File names must be different, for example, 010724.txn and 010724INV.txn.
